Top 5 reasons IT departments need an **automated** unified endpoint management system

The Plight of the IT Professional Without an Automated UEM

IT teams juggle too much, from managing endless endpoints and patching security gaps to fighting cyberthreats and keeping systems running, all while working with tight budgets and rising expectations. Without automation, the workload becomes even heavier, forcing them to spend their days fixing issues instead of preventing them.

A unified endpoint management (UEM) solution with built-in automation removes the burden of manual IT management. It keeps systems up to date, strengthens security and gives IT teams full visibility and control over every device, whether in the office, remote or in the cloud. Moreover, by consolidating key functions into a single dashboard, it eliminates the need to toggle between multiple tools, making workflows more efficient. With this level of control, IT teams can anticipate and resolve issues before they become disruptions, shifting from a reactive to a proactive mode that keeps operations running smoothly.

Over time, this shift creates a more streamlined and efficient IT environment, reducing repetitive tasks, improving response times, strengthening compliance and allowing IT teams to focus on initiatives that add real value to the business.

Here are the top FIVE benefits you'll gain from using a UEM solution:

1. Automated maintenance, upgrading/patching and backup

A UEM solution lifts a huge burden off IT professionals. It takes care of software updates, patches and backups automatically, so technicians don't have to chase down issues or worry about missed security fixes. By handling these tasks quietly in the background, UEM solutions reduces stress and frees IT teams to focus on bigger challenges that drive business success. Here's how automation makes a difference:

- ✓ **Reduces downtime:** Keep systems running smoothly, minimizing disruptions and vulnerabilities.

- ✓ **Increases productivity:** Frees IT staff to focus on strategic projects, leading to more efficient work processes.

- ✓ **Reduces costs:** Fewer manual interventions mean lower operational costs and more efficient resource utilization.

- ✓ **Improves satisfaction:** Smooth and reliable system performance enhances user trust and overall satisfaction.

- ✓ **Lean teams:** Automation decreases the need for a large IT team by handling routine tasks efficiently.

2. Automated ticket remediation

Say goodbye to the tedious process of diagnosing and fixing issues manually. UEM solutions automatically identify and resolve common IT problems, freeing up your support team to focus on more critical tasks. The perks include:

✓ **Eliminates manual issue diagnosis and resolution:** Automates the identification and fixing of common IT problems. Automatically triages tickets to ensure the most important issues are addressed first, ensuring consistent and timely resolution of common problems, leading to better support outcomes.

✓ **Boosts efficiency and productivity of IT support teams:** With fewer manual tasks to handle, your IT support team can focus on complex problems and strategic initiatives, improving overall productivity and service quality.
3. Automated performance monitoring

Instead of waiting for users to report slow systems or performance issues, UEM solutions continuously monitor device health in real-time. They detect problems early, such as high CPU usage, memory shortages or failing hardware, so IT teams can take action before issues escalate. This proactive approach reduces downtime, improves efficiency and keeps employees productive. Here's how it makes a difference:

✓ **Enhances productivity:** Improving performance monitoring results in more efficient operations and more effective use of your team's skills and resources.

✓ **Improves user satisfaction:** By identifying and resolving potential problems before they affect users, you ensure a smoother and more reliable experience for all users.

✓ **Elevates service levels from IT equipment/support staff:** Timely issue resolution minimizes downtime and disruptions, making IT support more efficient. It enhances the overall quality of service since your IT equipment and support staff can consistently maintain optimal performance and reliability.

4. Automated endpoint security

Protecting your IT environment is crucial, and UEM solutions make it easy by automating security measures. Automation reduces the risk of human error, ensures compliance with regulations and eliminates lag time from manual management. A robust and efficient security framework:

✓ **Strengthens IT infrastructure security:** UEM solutions continuously monitor and protect endpoints, identifying and mitigating threats in real-time to maintain a secure IT environment.

✓ **Reduces human errors:** The chances of mistakes that can occur with manual handling are minimized, ensuring more reliable protection.

✓ **Ensures compliance with regulations:** UEM solutions help maintain compliance with industry standards and regulations by consistently applying necessary security protocols and updates.

✓ **Eliminates lag time from manual management:** They ensure immediate implementation of security measures, reducing the lag time associated with manual patch management and security updates, thus providing continuous and up-to-date protection.

5. Automated IT reporting

Keeping stakeholders informed about IT performance is essential. UEM solutions simplify this by generating detailed reports automatically, saving you time and providing clear insights into the success of your IT initiatives. Automated reporting:

- ✓ **Showcases the impact and success of IT initiatives:** Automatically generated reports highlight key metrics and achievements, demonstrating the value of your IT efforts.

- ✓ **Simplifies report preparation and delivery to stakeholders:** UEM solutions automatically collect and analyze data and present it in customizable reports that can be easily tailored to meet specific stakeholder needs. These reports are then quickly shared through automated distribution channels, ensuring timely and accurate delivery to all relevant parties.

- ✓ **Saves time with pre-built templates:** Pre-built templates quickly generate comprehensive reports without the need for manual formatting and data compilation.

- ✓ **Drives better business outcomes:** Clear and concise reports provide valuable insights that help inform decision-making and drive strategic business improvements.

Start saving time

If your current endpoint management system makes these improvements difficult, it may be time for an upgrade.

As one IT director phrased it, *"I used to be in the dark ages, but thanks to automation, I now see the light."*

Outdated, clunky tools make IT management harder than it needs to be. Datto RMM changes that. It improves efficiency, strengthens your IT environment and integrates seamlessly with your existing stack. Stop letting inefficient workflows slow you down. It's time to do more with less and navigate IT budget cuts effectively.
