

# Reduce Your IT Team's Stress with 24/7/365 Threat Coverage from Datto EDR, Managed SOC & Datto AV

IT leaders are fighting an uphill battle against today's onslaught of cyberthreats. More often than not, under-resourced teams face a relentless pressure cooker of expectations, deadlines and overwork. This stress is intensified by an endless cycle of on-call weekends and a constant barrage of junk alerts that interrupt family time and holidays. However, a trio of seamlessly integrated solutions may be the key to reducing your IT team's stress.

## Datto Endpoint Detection and Response (EDR)

A cybersecurity solution designed to identify, investigate and respond to threats and malicious activities on endpoints. It employs advanced techniques, like behavioral analysis, deep memory analysis and threat intelligence, to catch sophisticated attacks.

## Datto Managed SOC powered by RocketCyber

This essential cybersecurity resource provides organizations with access to a team of seasoned security experts for 24/7 comprehensive security monitoring, threat detection and incident response services.

## Datto Antivirus (AV)

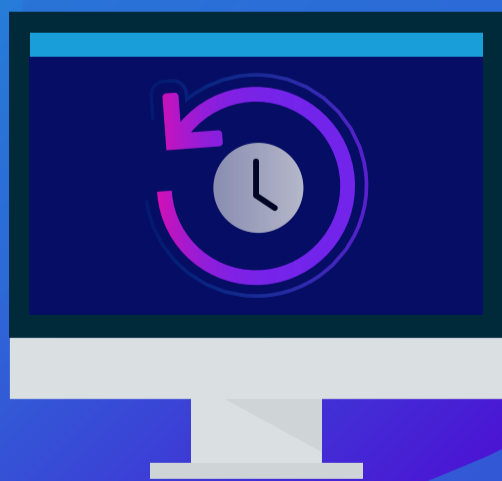

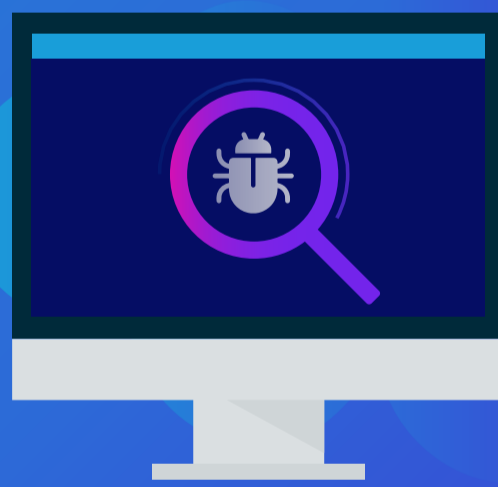

Next-gen software designed to protect against malware, including viruses, worms and trojans, from computers and networks. Unlike old-fashioned solutions that only rely on scanning for known virus signatures, Datto AV leverages machine learning and AI to proactively identify and block sophisticated threats including zero-day and polymorphic threats.

**"We wouldn't have known had the RocketCyber team not picked up on what Datto [EDR] identified."**

– Matthew B, VP of Information Technology at Pioneer Bank

EDR, AV and Managed SOC are powerhouse technologies that complement each other perfectly and integrate seamlessly together. This winning combination can affordably provide organizations with a better defense-in-depth posture and major benefits including:

- Alerts mapped to the MITRE ATT&CK framework to provide context and helpful clarity to your team.
- Quick identification, quarantine and thorough cleaning of infected systems.
- Comprehensive monitoring across endpoint, cloud and network

- Working with seasoned SOC analysts who have distilled their experience into building automated mitigation recommendations for today's advanced threats.
- 24/7/365 threat monitoring.
- Smart alerts that reduce false positive and junk alert volume technicians must sift through.

Learn more about how even a small IT team can have robust security without burnout when you choose to rely on the winning combination of Datto EDR, Datto Managed SOC and Datto AV in a data sheet.
