

Datto EDR smart investigate

AI-powered threat analysis

Security teams are drowning in alerts. Behavioral detections can take 10 to 30 minutes to investigate, requiring tedious searches, decoding long command lines and guessing what might be malicious.

This slow process frustrates junior analysts and burns out senior staff, leading to wasted time, higher costs and increased risk.

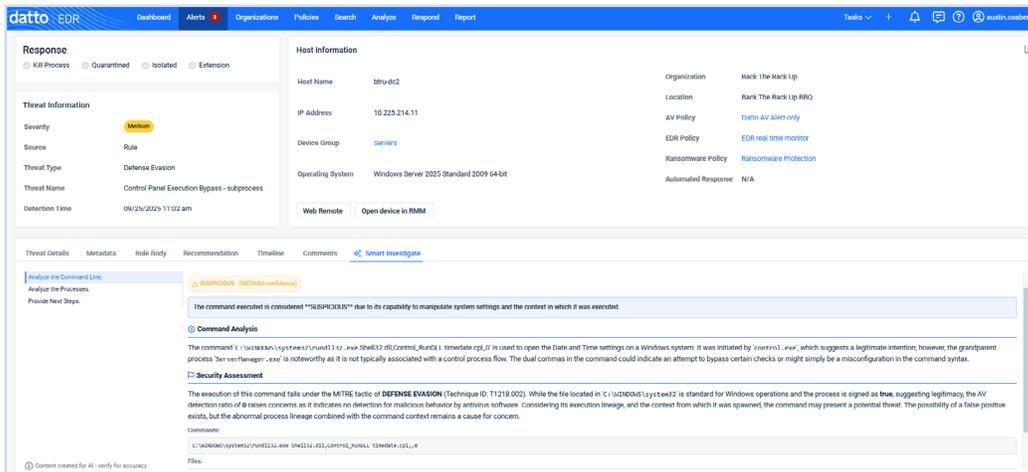

Cut investigation time from 30 minutes to seconds

Datto EDR's AI-powered feature, Smart Investigate, is designed to change how MSPs and small businesses manage security alerts. Built directly into every Behavioral Detection alert, analysts are just one click away from AI-powered analysis.

Instead of manual data combing, analysts can choose from a dynamic list of context-aware questions, such as **"Analyze the command line"** and instantly receive a clear, comprehensive AI summary of the alert's metadata. What would once take half an hour now takes seconds, turning uncertainty into clarity and hesitation into confidence.

Key benefits

- **Faster investigations:** Reduce analysis time from 30 minutes to seconds.
- **Expert-guided insights:** AI analysis derived from alert metadata and Datto's threat experts prompt engineering to deliver clear, actionable guidance.
- **Lower costs:** Scale investigations by enabling junior staff to handle more.

The Datto EDR difference

By weaving AI directly into the workflow, Datto EDR elevates analysts to operate at an expert level, ensuring stronger protection and quicker decisions. Security teams spend less time on repetitive triage and more time addressing high-priority threats that impact the business, ensuring stronger protection and faster decision-making.
