

# SaaS Protection for Microsoft Teams

## Explosive Teams Growth

Microsoft Teams, the company's communication, and collaboration messaging platform, has seen exponential growth in recent months due to the COVID 19 pandemic. A mere 15 months ago, Teams had 13 million users. Fast forward to October 2020, and it's been reported that Teams has 115 million daily users.

## Shared Responsibility

Given the shared responsibility model for data protection between Microsoft and managed service providers (MSPs), it is essential to implement tools to protect your clients' Teams data in the event it is compromised through accidental or malicious deletion, viruses, or ransomware.

## Why Microsoft Teams Protection is Important

- **Data loss due to permanent deletion.** If an employee accidentally deletes a critical file from OneDrive or an entire folder of important emails passes the retention period in the Trash, Microsoft will not be able to recover your data. Even if those files are within your retention period, locating and restoring lost data can be time consuming and costly.
- **Data loss due to a ransomware attack.** If your business suffers a ransomware attack, you need a backup to roll-back your data to a point-in-time before the attack occurred. Backup not only protects valuable business data, it also eliminates the need to pay a ransom to criminals—without any guarantee your files will be unlocked, or any future protection from the same attack.
- **Time and money lost in recovering files.** Retaining critical user data if employees leave a company can be costly without a backup solution in place and recovering data might take longer than your business can afford. It can take anywhere from minutes to weeks or longer to restore lost data using native SaaS application tools.

## Protecting Teams Data with Datto SaaS Protection

Datto SaaS Protection ensures protection for files, conversations, and calendar meetings in Microsoft Teams public channels.

Datto SaaS Protection makes it easy to keep your clients' Microsoft Teams data protected against permanent data loss. With our "Protect All" feature existing Teams users will be automatically protected. For new clients' simply check the "Auto-Add" to safeguard all new users. You can make these updates easily from the Manage Teams page. Datto SaaS Protection ensures you can access, control and most importantly protect your clients' Teams data.

## Flexible Recovery

Restores are faster and easier since you can now recover data associated with Teams directly from a Teams backup. You can recover an entire snapshot or granularly recover specific content, conversations, or calendar meetings. Data can be exported, restored to the same Team, or restored to another protected Team. Search capabilities are available at the tenant-level or snapshot-level within the Teams recovery interface.
