

Datto Secure Edge

Fast and Secure Network Access for Remote Workers

As more applications move to the cloud and remote or hybrid work becomes the norm, traditional security solutions struggle to keep up. The rise in SaaS usage and the shift to working from anywhere reveal that the “network edge is everywhere,” causing issues like video conferencing disruptions and security breaches. Unfortunately, current solutions fall short, making remote work challenging and security management difficult for MSPs.

Introducing Datto Secure Edge, a cloud-managed secure access solution for dispersed networks.

This innovation improves the overall safety, speed and usability of remote work by providing swift and secure access to business applications in the cloud or on-site. Specifically designed for MSPs, Datto Secure Edge offers profitable service with robust access control and security capabilities.

MSP-friendly

Datto Secure Edge empowers MSPs with the essential tools to efficiently manage dispersed endpoints and users. With user-friendly features, like easy cloud deployment, dynamic scalability, and transparent pricing, warranty and support, Datto Secure Edge ensures that MSPs are well-equipped to navigate the challenges of the remote-working landscape.

Advanced security

Datto Secure Edge extends the corporate security envelope beyond office boundaries to safeguard users and their data, regardless of their location. Leveraging cloud-based security tools, such as NG Firewall content filtering and threat management, Datto Secure Edge ensures end-to-end safety across dispersed networks.

Dedicated cloud firewall

Our cloud-based firewall and traffic remain exclusive to your business without sharing or splitting among other enterprises. This approach eliminates potential security risks and ensures optimal quality of service, avoiding any degradation that may occur when multiple business tenants share the same cloud resources.

Diverse compatibility

Datto Secure Edge seamlessly integrates with a variety of edge devices, minimizing disruption to existing SMB networks. Additionally, it offers compatibility with third-party Identity Providers (IDPs), providing a straightforward end-user authentication solution and supporting advanced options like IDP + multifactor authentication.

Your work Wi-Fi, at home

When choosing to use the Datto Secure Edge appliance, the corporate Wi-Fi SSID is automatically advertised for a seamless transition to your home office.

Secure SaaS applications

Because Datto Secure Edge next-generation cloud firewall's public IP address is static, it's easy and efficient to restrict access to commonly attacked SaaS services.

Work from home securely

Connect wired devices to the Secure Edge gateway using the Secure Edge Appliance LAN port. This connection mitigates security threats and protects digital assets through Zero Trust Network Access (ZTNA) and least privilege access control.

Datto Secure Edge features

Datto Secure Edge makes it easy for MSPs to ensure top-notch security for hybrid environments. With features like network traffic prioritization and content filtering, MSPs can provide their clients with the access, speed, security and connectivity they need from anywhere.

This cloud-based solution is designed specifically for MSPs and can be set up in minutes by just one person. It streamlines the management of network controls and prioritizes important business applications efficiently.

Next-gen firewall

Datto Secure Edge brings remote workers into the corporate security envelope by extending key security tools from the cloud-like firewall defense, DNS filtering, and application control services to protect users and their data wherever they're located.

Simple licensing and deployment

Pooled licensing, transferable seats, and subscription flexibility eases deployment and the opportunity for providers to perform self-service tasks to simplify and speed service activation.

Corporate Wi-Fi broadcasting

Replicate the work environment at home and do away with clunky, user-dependent connection methods by advertising the corporate SSID and connecting directly to work Wi-Fi.

Optional Datto Secure Edge Device required.

Management and control

Datto Secure Edge gives MSPs the power to monitor and control remote endpoints with usage tracking and alerts, dedicated activity reporting, auto-optimization, built-in support tools and application control.

Speed and performance

Maximize your productivity with fast VPN speeds, advanced encryption and the ability to separate workstreams while prioritizing critical business applications over public traffic. Eliminate bandwidth competition and ensure smooth workflow even in busy network environments.

ZTNA-easy

SafeCheck with Datto RMM keeps compromised and at-risk endpoints from joining your network. SafeCheck with SaaS Alerts is an easy and automated way to secure Microsoft 365 applications and Data. ZTNA is just a few clicks to secure at-risk endpoints and applications.

Mobile client support

Extend Zero Trust security to mobile devices with identity-based access or always-on connectivity. Available for iOS and Android.

Always-On connectivity

Ensure remote users stay connected and secure at all times. Users often disable their VPN connection because of latency. Always-On prevents users from turning off their secure connection.

Secure Edge Subscriptions
Gateway Subscription (DSE-GW-1Y, DSE-GW-3Y): Required for each instance.
Professional User Subscription (DSE-PRO-1Y, DSE-PRO-3Y): Required for each user.
Service and Subscription Terms
Connection Limits: Up to 3 active connections per user.
Data Allowance: Connections limited to 100 Mbps unless 50 GB data limit exceeded, then drops to 2 Mbps.
