

SaaS Alerts & Datto Secure Edge integration

Secure Microsoft 365 access with automated access controls.

Cloud applications like Microsoft 365 remain top targets for cybercriminals. And while multi-factor authentication (MFA) was once a strong line of defense, modern attacks are increasingly bypassing it, putting critical systems and data at risk.

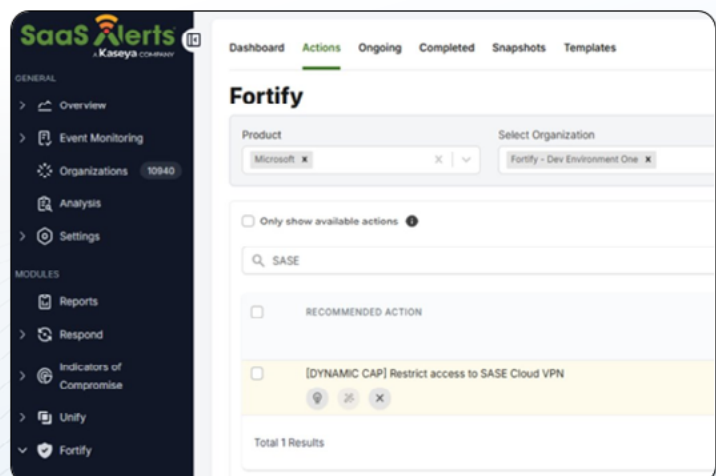

That's why we've launched a powerful new integration between Datto Secure Edge and SaaS Alerts Fortify. Together, they deliver user-aware Conditional Access that strengthens security by enforcing precise login restrictions based on user identity and network location.

Instead of manually configuring trusted IPs and user scopes in Microsoft 365, which can be time-consuming and error-prone, Secure Edge automatically shares each organization's gateway IP and subscribed user emails with SaaS Alerts. From there, admins can configure Conditional Access Policies that block unauthorized logins and allow access only from trusted users and location.

Once these initial policies are in place, every new user added via Secure Edge will automatically trigger a Conditional Access Policy update in Microsoft 365, powered by SaaS Alerts Fortify. This ensures your defenses stay dynamic and responsive to changes, enhancing both protection and compliance across

The result?

Less work, tighter control, reduced attack surface and an easier way to protect Microsoft 365 from unauthorized access.

Integration highlights

Say goodbye to manually maintaining Conditional Access policies.

Access control, automated

With the Secure Edge IP and user list shared to SaaS Alerts Fortify, IT admins can create M365 Conditional Access Policies with confidence – no spreadsheets, no guesswork.

Block attackers, even with credentials

Enforce user and network-based restrictions so that only devices connecting through Secure Edge gateways can reach Microsoft 365. Unauthorized users are stopped before they even try to log in.

No config files, no disruption

End users connect as usual with nothing to install or update. The protection works in the background, silently and effectively.

Reduced risk, simplified security

Limit Microsoft 365 access to only extensively verified users. Fewer exceptions, fewer errors, and better compliance with internal security policies.

One-click policy protection

Secure Edge and SaaS Alerts Fortify work together to eliminate the manual steps that slow down security policy rollout. Just review and apply.

SaaS Alerts and Datto Secure Edge keep Microsoft 365 access locked down.
