

Top 5 Reasons IT Teams Need Top-Tier Security Solutions

Today's threats don't kick down the door – they slip quietly through the cracks.

Cybercriminals are moving faster, striking with precision, and leaving IT teams with less time to respond. That's why your security tools need to provide real protection without adding complexity or slowing your team down. Security should be woven into how your team works every day – proactive, built-in and ready to adapt the moment something goes wrong.

That's where solutions like Endpoint Detection and Response (EDR) make a real difference. They don't just catch threats – they give your team the power to fight back, take control and recover with confidence.

If your current security setup is draining your team without delivering real protection, it's time to ask – at what cost? Your IT professionals deserve tools that lighten the load, not add to it. Datto's security solutions are built to give them what they need most: clarity in chaos, confidence in their response and control without the constant worry.

Security can't be an afterthought – not when so much is on the line.

1. Datto makes advanced detection simple

Cyberthreats are no longer easy to spot. Attackers today are far more sophisticated, using tactics like privilege escalation, lateral movement and encryption techniques to bypass traditional defenses. These threats often go unnoticed, quietly infiltrating systems and waiting for the right moment to strike. Without proactive, advanced cybersecurity, organizations risk catastrophic breaches that can compromise sensitive data, disrupt operations and damage reputations. The reasons you need advanced security tools are:

- ✓ **Automatic ransomware detection:** Proactively identify and isolate ransomware, stopping it before it has a chance to spread across your network.
- ✓ **Ransomware rollback:** Instantly recover encrypted files with real-time tracking and rollback features. For example, if your CEO's PowerPoint is suddenly encrypted, you can restore it without losing any work.
- ✓ **Behavioral tracking:** Advanced correlation engines detect unusual behavior patterns, catching suspicious activity that traditional AV tools often miss, even when no malware signature is present.

2. Sleep easy knowing Datto MDR is always on guard

The constant pressure to catch everything, all the time, is pushing IT teams to the brink. But security doesn't have to rest entirely on their shoulders. Managed detection and response (MDR) keeps watch around the clock, giving your team the breathing room they need and the confidence that trained experts are ready to detect, analyze and respond the moment it matters. Here's what 24/7 MDR brings to the table:

- ✓ **Always on, just like attackers:** Cybercriminals are relentless, often working at unpredictable hours. A 24/7 MDR solution ensures your defenses are always active, catching threats no matter when they strike.
- ✓ **Round-the-clock monitoring:** Expert analysts are watching your environment at all hours, identifying potential threats even when your IT team is off the clock.
- ✓ **Less noise, more focus:** Advanced systems reduce false positives, enabling your IT team to focus only on genuine threats while the MDR team weeds out distractions.
- ✓ **Faster response, stronger protection:** Real threats are addressed immediately, ensuring fast mitigation and continuous protection to prevent damage before it escalates.

3. Strengthen protection with Datto's multilayered security

As cyberattacks become more advanced, a single layer of defense is no longer enough. Modern threats often use multistage tactics, so if one layer of security fails, others need to be ready to act. Whether the attacks target an endpoint, your network or the cloud, a strong multilayered strategy ensures:

- ✓ **Protection across each stage and environment:** Traditional AV solutions can detect and block known malicious files, but if an attacker bypasses AV, picks up the slack, monitoring for unusual behavior across devices. On top of this, MDR provides human oversight, detecting and responding to threats in real-time.
- ✓ **Comprehensive threat detection:** The integration of AV, EDR and MDR creates an intelligent system capable of responding to a wide range of attacks, ensuring that every layer – endpoint, cloud or network – remains secure.
- ✓ **Centralized alerts:** A multilayered approach centralizes all security alerts into a single platform, where every threat is visible and handled cohesively. This means no more juggling between separate tools, whether it's an alert from the AV system, EDR or network intrusion detection.

4. Datto brings security together in one unified platform

When your security stack is scattered across multiple systems, critical signals can get lost in the noise. That's where a unified approach makes all the difference. By bringing your defenses under one platform, you give your team the visibility, control and confidence they need to act fast – without toggling between tools or missing key threats. Datto's integrated security platform delivers this kind of coordinated protection. Here's what it brings to your IT team:

- ✓ **Omniscient endpoint management:** Gain full control over all your endpoints from a single platform, ensuring seamless security and easier management across your entire network.
- ✓ **Flexible integration:** Easily integrates with other essential tools like firewalls, email security and remote monitoring and management (RMM), allowing for a more robust and comprehensive security strategy.
- ✓ **Ease of use:** Centralize your security actions for faster response and less complexity.
- ✓ **Customizable platform:** Tailor the platform to fit your specific security needs, with options to scale and adapt as your IT environment grows or changes.

5. Datto delivers proven and trusted protection

In a threat environment that's constantly evolving, you need solutions that have been tested, validated and trusted to perform under pressure. That's why so many IT leaders choose Datto. It's not just about features – it's about results you can rely on.

- ✓ **Third-party testing:** Datto engaged Miercom to evaluate its EDR and AV solutions against competitors. The results were impressive:
 - 98% detection rate for zero-day threats – more than double the industry average of 45%.
 - 99.62% overall malware detection rate, outperforming the industry average of 73%.
- ✓ **Trusted by peers:** Don't just take our word for it – explore reviews on G2 to see how real IT teams are using [Datto EDR](#) and [AV](#) in the field.
- ✓ **Customer success stories:** “Datto EDR and MDR have been instrumental in securing our operations,” says Mitchell Kinard, Information Technology Manager at [Novum Energy](#).

Complete protection with zero hassle

Your team deserves more than a patchwork of tools and reactive fixes. They need protection that's continuous, intelligent and proven to work when it matters most.

Datto's unified security platform brings together powerful tools like EDR, AV and MDR under one roof, reducing complexity while raising the standard of protection.

Want proof? Independent testing confirms what our customers already know – Datto delivers.
