The Security Stack That Makes IT Stronger

Datto's all-in-one security stack delivers protection so effectively, you won't have to think twice about it.

Enterprise-grade protection that covers it all

At Datto, we don't believe in stacking tools just to tick boxes. Our enterprise-grade security solutions work together to protect your endpoints and keep your systems secure. They share context, cut out extra noise and save time by reducing manual work. They are also proven to spot problems early, respond quickly and help you recover fast.

Our complete, layered security stack includes:

-  **Antivirus (AV)**
-  **DNS filtering**
-  **Endpoint detection and response (EDR)**
-  **Managed detection and response (MDR)**
-  **Automatic ransomware detection and response**

How Datto maps to the six core functions of NIST

Datto's security stack easily meets the cybersecurity guidelines set by the National Institute of Standards and Technology (NIST), while solving everyday challenges in a practical way.

Enterprise-grade security without the enterprise price

Most cybersecurity tools are built for Fortune 100 budgets, not lean IT teams. They come loaded with high costs, complex interfaces and the need for a full security staff. Datto changes that. You get powerful, proven protection that's simple to manage and doesn't drain your time or budget.

What makes it work:

- 99.62% malware detection rate with [Datto EDR](#) and [Datto AV](#) compared to the industry average of just 73%.
- 98% zero-day threat detection – more than double the class average of 45%.
- Designed to be effective without requiring a dedicated cybersecurity team.
- Simple, integrated setup that doesn't slow down your team.

Discover the proven power of [Datto AV and Datto EDR](#).

“Datto EDR is like a boa constrictor. Nothing gets past it unless you allow it.”

*- Corey Mason, Network Services Manager,
United Systems and Software*

“Datto EDR and RocketCyber have been instrumental in securing our global operations. Real-time threat detection and proactive SOC response let us expand securely.”

- Mitchell Kinard, IT Manager, Novum Energy

Enterprise-grade ransomware defense that reacts in seconds

Legacy tools rely on old tricks, like waiting for a decoy file to be hit before sounding the alarm. That delay gives ransomware groups a head start. [Datto's ransomware detection](#) spots the activity instantly and shuts it down in real-time before major damage can happen. It's [faster than human response](#) and far more reliable than old canary-based systems.

The proof is in the performance:

- Proprietary ransomware detection stops attacks in seconds, not minutes.
- Advanced machine learning and behavior analytics block evolving threats before they spread.
- 24/7 SOC ensures immediate response with real-time threat containment.
- Actionable insights and simplified threat management reduce alert fatigue.

“The response time was a little over a minute from the start of the encryption that triggered the alert and the response of the ransomware policy. That was extremely impressive”

- Casey Postma, Cybersecurity Lead at ITPartners+

“The 24/7 SOC has been very beneficial. I received a call one night from the SOC that enabled immediate threat containment.”

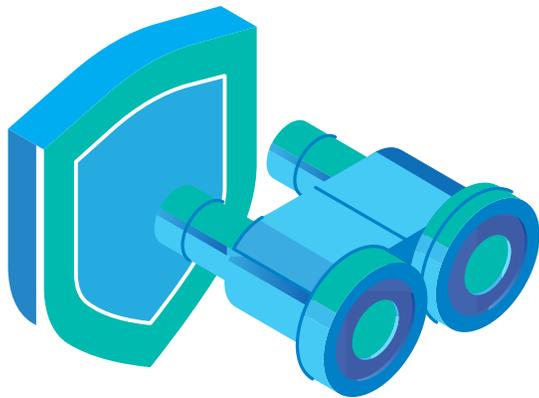

- Verified G2 Reviewer

Enterprise-grade security backed by a 24/7 team of real experts

With Datto, you get the tools and the team. While you focus on everything else demanding your time, our [security operations center](#) (SOC) is already watching, analyzing and acting. Should you need help, our experts are just a phone call away.

What you can count on:

- Expert SOC analysts filter out the noise and alert you only to real, actionable threats.
- Direct access to support – no need to raise tickets or send emails back and forth.
- Less alert fatigue, more peace of mind for your team.

“The SOC analysts are extremely knowledgeable and quick on their feet, with answers to any questions readily available. I haven’t had a call where they didn’t have an answer prepared.”

- Zach Browning, Director of Managed Technology Solutions, Cispoint

“Great onboarding team. Getting set up was a breeze. Within minutes I was being notified by the SOC of issues.”

- Bill W, IT Manager (per G2)

Transform your security stack without changing everything else

We built Datto security the way we did, not to add to your workload but to take some of it off your plate. You should not need a team of ten to feel protected. Protection should feel natural. Invisible when things are quiet and immediate when something goes wrong.

Let our customers tell you what that looks like:

Seamless from the start

"From integration to setup, everything was seamless. Immediate ROI with real-time threat detection reducing our response times drastically."

- Zach Browning, Director, CISPOINT

Complete coverage, real confidence

"The unified security approach, combining next-gen antivirus, EDR and MDR, gives us peace of mind knowing our endpoints are well-protected. The ransomware detection and quarantine feature is particularly impressive."

- Verified G2 Reviewer

Better than expected

"We were never expecting Datto EDR and AV to be as good as they were from day one."

- Corey Mason, Network Services Manager,
United Systems and Software

Built to hold the line

"Datto EDR: Rock Solid Protection That Won't Let You Down."

- Fausto C., Senior Engineer (G2)

High value, high performance

"Powerful, affordable, high-efficacy product."

- James G., President (G2)

Discover the Value of Datto's Security Stack

Datto's comprehensive MDR provides 24/7 threat protection with the power of Datto Managed SOC, EDR and AV. It is fully integrated, always watching and ready to respond before you even know there's a threat.

About Datto

As a leading global provider of security and cloud-based software solutions purpose-built for managed service providers (MSPs), Datto, a Kaseya Company, believes there is no limit to what small and medium-sized businesses (SMBs) can achieve with the right technology. Datto's proven Unified Continuity, Networking, Endpoint Management and Business Management solutions drive cyber resilience, efficiency and growth for MSPs. Delivered via an integrated platform, Datto's solutions help its global ecosystem of MSP partners serve over one million businesses around the world. From proactive dynamic detection and prevention to fast, flexible recovery from cyber incidents, Datto's solutions defend against costly downtime and data loss in servers, virtual machines, cloud applications or anywhere data resides. Since its founding in 2007, Datto has won numerous awards for its product excellence, superior technical support and rapid growth, and for fostering an outstanding workplace. With headquarters in Miami, Florida, Datto has global offices in Norwalk, Connecticut as well as Australia, Canada, Denmark, Germany, the Netherlands and the United Kingdom.
