

Datto Endpoint Backup for PCs

Eliminate data loss and help your clients get their employees back up and running quickly with Datto Endpoint Backup for PCs. This reliable, image-based, all-in-one backup and recovery solution provides backup direct to the Datto Cloud, screenshot verification, and multiple layers of recovery capabilities, including Bare Metal Restore and File/Folder Recovery. In the event of a lost or stolen PC, accidental deletion, ransomware attack, or other disaster, MSPs can quickly and easily get their customer up and running, exactly as they had been before.

All-in-One Backup and Recovery for PCs

Whether it's because of a ransomware attack, lost or stolen device, or accidental deletion of a file, you can now confidently offer clients a solution not only for the protection of endpoint business data on their Windows based devices, but also for streamlined recovery of the entire device configuration, setup and applications.

- Easily restore individual files and folders
- Reliably recover from ransomware attacks
- Rapidly restore lost or stolen PCs
- Simplify admin self-service file/folder recovery for clients

Reliable PC Backups

PCs move between networks or get powered off, making it difficult to get reliable backups. Datto Endpoint Backup for PCs backup automatically pauses when the device has its connection interrupted and then automatically resumes once the connection is restored. Integrity checks, like Screenshot Verification, validate every backup and provide an alert if there are any issues. This takes the guesswork out and ensures backups are good for a reliable recovery.

Simple Deployment and Management

The Datto Endpoint Backup agent sits on the protected PC and connects directly to the Datto Cloud without the need for a local appliance. MSPs can easily purchase, manage, and monitor Endpoint Backup for PCs in the Partner Portal, the same place they do for other Datto products. Here they can pause and delete agents and view recent screenshots, as well as perform bare metal restore, point-in-time rollback, and file/folder restore.

Integrations with Autotask PSA, Datto RMM and myITprocess allow to streamline client billing, deploy agents, monitor backups, and create reports easily and efficiently.

And automated Hero reports enable MSPs to easily prove the value of their services, positioning their offering as premium.

One Price, Zero Complications

Datto Endpoint Backup for PCs is designed to make it incredibly easy to resell and maintain consistent margins over time. No storage management is required, there are no surprise recovery charges, and backups are available with 1-year time-based retention (TBR) in the Datto Cloud.

Protect Business Data No Matter Where It Lives

Datto Endpoint Backup for PCs is part of Datto’s entire Unified Backup product line, which includes complete protection for servers private or public cloud and SaaS data. With Datto Endpoint Backup for PCs, MSPs now have a powerful way to protect a broad range of PCs no matter where they operate from, opening up a even greater opportunity for partners to generate revenue while delivering the highest levels of business uptime.
