

Datto SaaS Defense for Microsoft 365

Datto SaaS Defense is a comprehensive threat protection solution for Microsoft 365 applications. SaaS Defense ensures that managed service providers (MSPs) can proactively identify and protect against zero-day threats across the Microsoft 365 suite, including Exchange, OneDrive, SharePoint, and Teams.

Limitations of ATP solutions

While MSPs leveraging an Advanced Threat Protection (ATP) solution have taken the necessary step to go beyond essential threat protection, they are still leaving themselves open to attacks, given the inadequate threat detection rates amongst most ATP vendors on the market.

Zero-day threats are evolving every day, and hackers are sophisticated enough to penetrate attack vectors beyond email. Unfortunately, many solutions fall short in protecting the entire Microsoft suite.

Datto SaaS Defense

SaaS Defense is an ATP and spam filtering solution that detects unknown malware threats at first encounter across the Microsoft 365 collaboration suite, shortening the time to detection and helping to close the threat protection gap.

SaaS Defense's data-independent technology was developed by security experts to stop zero-day threats and proactively defend against malware, phishing, and business email compromise (BEC) attacks that target Microsoft Exchange, OneDrive, SharePoint, and Teams.

Detection against the unknown

Traditional email security solutions depend on data of previously known cyber threats and their penetration modes, thereby leaving protection gaps for new, unknown threats. With Datto SaaS Defense, MSPs can feel confident that cyber threats—even zero-day threats—are stopped as soon as they are encountered and time to detect is minimized.

- **Identify unknown threats:** SaaS Defense's data-independent technology detects unknown threats that other solutions miss by analyzing the composition of a safe email, chat, or document rather than scanning for already known security threats.
- **Minimize time to detection:** Datto SaaS Defense does not rely on third-party software and is built from the ground up to prevent zero-day threats as soon as they are encountered, minimizing the time needed to detect an intrusion.
- **Superior Microsoft 365 protection:** When tested by Miercom*, SaaS Defense detected 96% of the malware threats delivered by Microsoft 365 applications, even catching threats that were missed by native Microsoft security.

Comprehensive threat protection

SaaS Defense provides MSPs with advanced threat protection and spam filtering for critical business data in Microsoft 365.

- **Protection beyond email:** Cyber threats are not limited to just phishing emails—proactively protect your clients' Microsoft 365 suite, including OneDrive, SharePoint, and Teams, from ransomware, malware, phishing, and BEC.
- **Spam filtering:** Configure customizable spam filtering with a single click and add another level of protection to your clients' inbox.
- **Impressive Business Email Compromise (BEC) detection:** In a Miercom test, SaaS Defense proved 91% detection efficacy for business email compromise threats, outperforming competition by at least 29%.

Detailed monitoring and reporting

Traditional ATP solutions are built for large enterprises, with complex scoring models and confusing reporting metrics, it's difficult to understand why a threat was flagged. MSPs need detailed, simple explanations as to what threats were identified and why.

- **Silent detection:** Proactively monitor and eliminate cyber threats as soon as they are encountered without manual interference or end-client disruption.
- **Robust reporting:** Demonstrate product value with simple, detailed reporting that articulates why a threat was identified as malicious.

Enterprise-grade security packaged for MSPs

Expand your addressable market and offer clients a simple and robust threat protection solution that goes beyond just email security.

- Seamless deployment and management: Get new clients up and running in minutes with two-click onboarding and multi-tenant management from a single dashboard. Meircom reports SaaS Defense time value benefit is far superior as compared to the competition.
- Designed for MSP growth: Built exclusively for MSPs, Datto SaaS Defense helps MSPs attract new clients and expand market share with an enterprise-grade security solution without the need for additional headcount or confusing security training.
- Direct access to Datto technical experts: Eliminate multi-vendor confusion and new product fatigue while providing an extra confidence level when deploying new technology.
- API-Based solution: Traditional, SEG-based solutions require a change to the DNS MX record which slows down deployment and allows threat actors clear visibility into which email security solution is being used and gives the information needed to evade the solution and launch targeted attacks.

How Datto SaaS Defense works

A fully integrated cloud security solution

Protect and defend your clients' critical cloud data against unknown cyber threats and common data loss scenarios with comprehensive detection, protection, and recovery from a single, channel-focused vendor.

Datto offers a completely integrated solution built exclusively for MSPs that scans Microsoft 365 for malicious cyber threats and ensures complete protection with 3x daily backups and flexible, fast recovery.
