

The Datto Cloud

The Purpose-Built Backup & Recovery Cloud

Not all clouds are created equal and there are few purpose-built for backup and recovery which is why the Datto Cloud is unique. The Datto Cloud is the backbone for Datto Unified Continuity by not only providing offsite images of backups but protecting them from harm through multiple layers of security. MSPs can be assured their client's data is secure and recoverable.

- **SIRIS** for cross-platform server and virtual machine data protection
- **SaaS Protection** for Microsoft Office 365 and Google Workspace data protection
- **Cloud Continuity for PCs** for PC data protection

In addition to the Datto Cloud as their backup repository, all Unified Continuity solutions utilize the secure Datto Partner Portal for multi-tenant management of client backups and restores.

The screenshot displays the Datto Partner Portal interface. On the left, a sidebar menu includes 'Device Details', 'Device Overview', 'Hardware & Software Status', 'Tickets', 'Billing Info', 'Replication Details', 'Notes', and 'Agents'. The main content area is titled 'Agents' and features a table with columns for 'Agent Name', 'Unprotected Volumes', 'Last 10 Backup Attempts', 'Local Backup', 'Offsite Sync', and 'Screenshot Verification'. Below the table, there is a detailed view for the 'krausecentos7' agent, showing system information like 'ZFS VOLUME: krausecentos7', 'OPERATING SYSTEM: CentOS Linux 7 (Core)', and 'AGENT VERSION: 2.73.1'. It also includes a 'VOLUMES' section with status indicators for '<SWAP>', '/', and '/BOOT'. A 'SCREENSHOT VERIFICATION' section shows a date of '24-Feb-2021 5:01 AM' and a screenshot of the agent's interface. At the bottom, it says 'Showing 1 to 10 of 10 entries'.

The secure Partner Portal provides a single-pane-of-glass view into client backup & recovery

SIRIS + The Datto Cloud

SIRIS is a cloud-first data protection solution built for MSPs to protect and recover their clients data. SIRIS utilizes the secure Datto Cloud for the following core functionality.

- Offsite backup snapshot retention
- Cloud based recovery (aka DRaaS)
 - Entire systems or files / folders

Solutions that utilize a public cloud for offsite backup and disaster recovery will incur variable costs associated with not only storing backup data, but recovering systems. With the Datto Cloud, MSPs incur none of these costs, providing a predictable cost model to protect client data.

How does your cloud stack up to the Datto Cloud?

	SIRIS + The Datto Cloud	Public/Other Clouds
Immutable design for security	●	-
Encryption during replication and at rest	●	-
Optional infinite backup retention	●	-
Mandatory two factor access (2FA)	●	-
Cloud Deletion Defense™	●	-
6 Second Instant Virtualization	●	-
Disaster Recovery as a Service (DRaaS)	●	-
Flat fee DRaaS	●	-
Predictable cost model	●	-
Intuitive Recovery Launchpad	●	-
Cloud based administrative portal	●	-
Geographically dispersed locations	●	-
99.99999% availability	●	-
Zero admin overhead	●	-
Multi-tenant design	●	-
Proven, exabyte class scalability	●	-

SIRIS + The Datto Cloud

SIRIS plus the Datto Cloud set the standard for cloud-first data protection. The following is a guide to their core cloud features:

Immutable design for security: The Datto cloud includes multiple levels of security to protect client data, backed by a team of in-house security professionals. Additionally, the design of the backup snapshots themselves are not susceptible to ransomware.

Encryption during replication and at rest: AES 256 encryption is used during the replication of local backup snapshots to the Datto Cloud. In addition, backup snapshots are encrypted in the Datto Cloud via hardware encryption.

Optional Infinite Retention: MSPs can choose either time based or infinite backup retention for their client's backup snapshots

Mandatory 2FA: Datto requires all admin access to the Datto Cloud be via two factor authentication. In addition, the Datto Appliance (if used) has no admin access to the cloud.

Cloud Deletion Defense™: In case of accidental or malicious deletion of backup agents or groups of snapshots, Cloud Deletion Defense can "undelete" these actions.

6 Second Instant Virtualization: DRaaS is possible via the Instant Virtualization feature that creates a new recovery VM in the Datto Cloud using whatever backup point is chosen.

Disaster Recovery as a Service & Flat Fee DRaaS: Using SIRIS and the Datto Cloud, MSPs can recover one or all of their clients systems (servers and/or virtual machines) with no additional costs.

Predictable Cost Model: Because the Datto Cloud is a private, purpose-built cloud, MSPs do not have to worry about the compute costs associated with a public cloud like AWS.

Intuitive Recovery Launchpad: The portal based interface that recovers files in just a few clicks while simplifying complex tasks like resource allocation, VM creation, and networking that are related to a full system recovery.

Cloud Based Admin Portal: The secure administration portal provides MSPs with a single-pane-of-glass interface into their client backups.

Geographically dispersed locations: The Datto Cloud exists in multiple data centers across the world to not only provide offsite backup and recovery services but to maintain data sovereignty.

99.99999% availability: The Datto Cloud is built for reliability and availability supporting over 10,000 restores per month and over 25,000 cloud-based recoveries in a 12 month period.

Zero admin overhead: MSPs incur no administrative overhead with the Datto Cloud.

Multi-tenant design: The Datto Cloud was purpose-built for MSPs to administer backup and recovery for dozens or thousands of clients with a single-pane-of-glass backup portal.

Exabyte class scalability: The Datto Cloud supports over 1 million end clients and thousands of recoveries.
