About the Report

Datto’s Global State of the Channel Ransomware Report is comprised of statistics pulled from a survey of 1,400+ managed service providers (MSPs), our partners, and clients, around the world. The report provides unique visibility into the state of ransomware from the perspective of the IT Channel and their SMB clients who are dealing with these infections on a daily basis. The report provides a wealth of detail on ransomware, including year-over-year trends, frequency, targets, impact, and recommendations for ensuring recovery and continuity in the face of the growing threat.

To learn more about the report, please reach out to Katie Thornton, Director of Content & Marketing Programs at Datto, Inc.

About Datto

As the world's leading provider of IT solutions delivered by Managed Service Providers (MSPs), Datto believes there is no limit to what small and medium businesses can achieve with the right technology. Datto offers business continuity and disaster recovery, networking, business management, and file backup and sync solutions, and has created a one-of-a-kind ecosystem of partners that provide Datto solutions to businesses across the globe. Since its founding in 2007, Datto continues to win awards each year for its rapid growth, product excellence, superior technical support, and for fostering an outstanding workplace. With global headquarters in Norwalk, Connecticut, Datto has international offices in the United Kingdom, Netherlands, Denmark, Germany, Canada, Australia, China, and Singapore. Learn more at datto.com.
Key Findings

- Ransomware remains the most prominent malware threat. In 2019, 85% of MSPs report ransomware as the most common malware threat to SMBs.

- In the first half of 2019 alone, 56% of MSPs report attacks against clients. 15% of MSPs report multiple ransomware attacks in a single day.

- On average, 1 in 5 SMBs report that they’ve fallen victim to a ransomware attack. SMBs who don’t outsource their IT services are more at risk.*

- When it comes to the ransomware threat, there is a disconnect between MSPs and SMBs. 89% of MSPs are “very concerned” about the ransomware threat and 28% report their SMB clients feel the same.

- MSPs rank phishing emails as the leading cause of successful attacks. Lack of cybersecurity training, weak passwords, and poor user practices are among the other top causes.

- The aftermath of a ransomware attack can be a nightmare for any business. Nearly half of MSPs report victimized clients experienced business-threatening downtime.

- The average ransom requested by hackers is increasing. MSPs report the average requested ransom for SMBs is ~$5,900, up 37%, year-over-year.

- Downtime costs are up by 200% year-over-year, and the cost of downtime is 23X greater than the average ransom requested in 2019.

- 92% of MSPs report that clients with BCDR solutions in place are less likely to experience significant downtime during a ransomware attack. 4 in 5 MSPs report that victimized clients with BCDR in place recovered from the attack in 24 hours, or less.

- SMBs aren’t the only businesses being targeted by hackers. 4 in 5 MSPs agree that their own businesses are being increasingly targeted by ransomware attacks.

*Source: Strategy Analytics’ proprietary research of the North American SMB market.
Which of the following types of malware have affected your clients in the last 2 years?

- **61%** of MSPs report SMBs struck by viruses
- **54%** of MSPs report SMBs struck by adware
- **46%** of MSPs report SMBs struck by spyware
- **29%** of MSPs report SMBs struck by cryptojacking
- **26%** of MSPs report SMBs struck by remote access trojans
- **20%** of MSPs report SMBs struck by rootkits
- **18%** of MSPs report SMBs struck by worms
- **14%** of MSPs report SMBs struck by keyloggers
- **13%** of MSPs report SMBs struck by exploit kits

*Survey respondents were able to select multiple answer choices.*
In Australia and New Zealand, 91% of MSPs report attacks against SMBs in the last two years, the highest rate globally.

Geo Trend:
In Australia and New Zealand, 91% of MSPs report attacks against SMBs in the last two years, the highest rate globally.

Among the malware threats impacting SMBs, ransomware is the biggest offender.

85% of MSPs report attacks against SMBs in the last two years

In the first half of 2019 alone, 56% of MSPs report attacks against clients

15% of MSPs report multiple ransomware attacks in a single day

Ransomware is #1 Malware Threat to SMBs
1 in 5 SMBs report that they've fallen victim to a ransomware attack.*

On average, SMBs who don't outsource their IT services report facing more ransomware attacks.*

*Source: Strategy Analytics’ proprietary research of the North American SMB market.
There is a disconnect between SMBs and MSPs on the significance of the ransomware threat.

In 2019
28% of MSPs report SMBs are ‘very concerned’ about ransomware.

89% of MSPs report SMBs should be ‘very concerned’ about the threat.
MSPs report clients fell victim to ransomware despite having implemented the following:

- Antivirus software
- Email/spam filters
- Ad/pop-up blockers
- Endpoint detection and response platform

Traditional cybersecurity solutions like antivirus and email/spam filters are no match for many cyber attackers. **MSPs need to take a multilayered approach to ransomware, with business continuity at the core.**
Which of the following are the leading causes of ransomware?

67% of MSPs report phishing emails

36% of MSPs report lack of cybersecurity training

30% of MSPs report weak passwords/access management

25% of MSPs report poor user practices/gullibility
16% of MSPs report malicious websites/web ads
16% of MSPs report clickbait

Phishing, lack of cybersecurity training, and weak passwords are the top three causes of successful ransomware attacks.

*Survey respondents were able to select multiple answer choices.*
Ransomware Attacks: The Aftermath

Which of the following consequences resulted from a ransomware attack?

- **64%** of MSPs report a loss of business productivity
- **45%** of MSPs report business-threatening downtime
- **34%** of MSPs report lost data and/or device
- **33%** of MSPs report infection spread to other devices on the network
- **29%** of MSPs report decreased client profitability
- **24%** of MSPs report clients paid a ransom and recovered the data

*Survey respondents were able to select multiple answer choices.*

Calculate the cost of potential downtime with the Downtime Cost Calculator

**18%** of MSPs report damaged reputations
**12%** of MSPs report stolen data
**10%** of MSPs report ransomware remained on system and struck again!
**7%** of MSPs report failure to achieve regulatory compliance
**6%** of MSPs report failure to meet SLA requirements
**4%** of MSPs report clients paid ransom but data was never released
Average Ransom

2018: $4,300  
2019: $5,900

MSPs report the average cost of ransom increased by 37% from previous year.

Average Cost of Downtime

2018: $46,800  
2019: $141,000

The average downtime cost per incident has soared over 200% from previous year.

Geo Trend:

In Canada, MSPs report the highest average cost of downtime at $180,000.

*All survey respondents answered in U.S. dollars.
Which of the following strains of ransomware have affected your clients?

- **66%** of MSPs report CryptoLocker
- **49%** of MSPs report WannaCry
- **34%** of MSPs report CryptoWall
- **24%** of MSPs report Locky
- **17%** of MSPs report Petya
- **14%** of MSPs report CryptXXX
- **12%** of MSPs report notPetya
- **11%** of MSPs report TeslaCrypt
- **10%** of MSPs report Emotet (NEW)
- **7%** of MSPs report CBT Locker
- **7%** of MSPs report TorrentLocker
- **7%** of MSPs report CrySis
- **6%** of MSPs report Bad Rabbit
- **5%** of MSPs report Wallet (NEW)
- **4%** of MSPs report CoinVault

For the 4th consecutive year, **MSPs report CryptoLocker as the top ransomware variant** attacking clients.

*Survey respondents were able to select multiple answer choices.*
32% of MSPs report
Construction and Manufacturing most targeted by ransomware

It’s not surprising that Construction and Manufacturing are top targets for ransomware. These industries are in a constant wave that flows with the ups and downs of the economy. Because of this, much of their work is project-based and recurring revenue is rare. As a result, it makes it difficult to invest in IT staffing or IT services that require monthly fees.

Vince Tinnirello, Managing Director, Anchor Network Solutions, Inc.

31% Professional Services
23% Healthcare
20% Finance/Insurance
18% Non-Profit
18% Legal
15% Retail
12% Real Estate
9% Architecture/Design
9% Government
8% Education
7% Consumer Products
5% Travel/Transportation
6% Media/Entertainment
4% High Technology
4% Energy/Utilities
2% Telecom
11% Other/None

*Survey respondents were able to select multiple answer choices.*
Survey respondents were able to select multiple answer choices.

In Europe, 10% of MSPs report ransomware infecting Android systems, exceeding the global average of 5%.

**Geo Trend:**
In Europe, 10% of MSPs report ransomware infecting Android systems, exceeding the global average of 5%.

---

Of the 89%...

- **87%** of MSPs report attacks on Windows PC
- **11%** of MSPs report attacks on Windows Tablet
- **7%** of MSPs report attacks on MacOS X
- **5%** of MSPs report attacks on Android
- **3%** of MSPs report attacks on iOS

---

*Survey respondents were able to select multiple answer choices.*
In Australia and New Zealand, 37% of MSPs report attacks on SaaS applications, the highest rate globally.

Geo Trend:

*Survey respondents were able to select multiple answer choices.*

**Source: Strategy Analytics’ proprietary research of the North American SMB market.**

SMBs report 11% to 50% of their IT infrastructure is based in the cloud. This is expected to increase over the next 3 years, where most expect 21% to 75% to be in the cloud.**

47% of MSPs report attacks within Dropbox

18% of MSPs report attacks within G Suite

6% of MSPs report attacks within Box

2% of MSPs report attacks within Salesforce

Of the 28%:

64% of MSPs report attacks within Office 365 (up from 49% in 2018)

28% of MSPs report ransomware attacks in SaaS applications

Of the 28%:

*Survey respondents were able to select multiple answer choices.*

**Source: Strategy Analytics’ proprietary research of the North American SMB market.**

Ransomware Descends Over Office 365
Which methods have you used to recover a client from a ransomware infection?

69% of MSPs report reimaging a machine.

53% of MSPs report virtualizing the system from a backup image.

37% of MSPs report running software to cleanup threat.

16% of MSPs report downloading a purpose-built software tool designed for ransomware recovery.

15% of MSPs report relying on endpoint antivirus to recover.

12% of MSPs report finding a decryption key.

*Survey respondents were able to select multiple answer choices.*
It can be difficult to identify the source of a ransomware threat or how long that threat has been latent in a given environment. Because of that, we suspect MSPs are using a variety of methods to recover clients on a case-by-case basis. **Today’s MSPs need robust recovery plans that address the tactics of the different threats their clients are facing.** They can achieve this by selecting vendors who offer multiple recovery options that can be customized based on the incident at hand. They should also develop a plan to assure the safe operating state of a backup where threats may have lain dormant for a period of time.

*Ryan Weeks*, Chief Information Security Officer, Datto, Inc.
Business Continuity and Disaster Recovery (BCDR)

Employee training

Patch management

Unified threat management

Identity and access management solution

Antivirus / Anti-malware software

Email / Spam filters

Endpoint / Mobile management platform

Browser isolation

Endpoint detection and response platform (NEW!)

Traditional antivirus solutions are only effective for detecting threats that have been seen before, and ransomware is good at evading these detection engines. Endpoint detection and response software looks at how processes interact with an operating system, and call out or prevent activities that look and behave like malware.

David Thomas, Group Managing Director, Bluegrass Group Ltd
With BCDR, ransomware recovery 4X more likely than without:

* 92% of MSPs report that clients with BCDR products in place are less likely to experience significant downtime from ransomware.

**With BCDR,**
- 4 in 5 MSPs report clients fully recovered in 24 hours, or less.

**Without BCDR,**
- Less than 1 in 5 MSPs report clients were able to do the same.

Check out a demo of Datto BCDR. Learn More.
96% of MSPs predict attacks will continue at current, or worse, rates.
IoT Tops the List of Future Ransomware Attack Targets

64% of MSPs predict ransomware will target IoT devices.

63% of MSPs predict ransomware will target social media accounts.

56% of MSPs predict ransomware will capture critical utility infrastructures (e.g., power grids).

62% of MSPs predict ransomware will bankrupt whole companies.

49% of MSPs predict ransomware will target users based on demographics.

Why IoT?
Many of these devices aren’t designed with security in mind, and cyber attackers will find ways to exploit this vulnerability. There are projected to be over 20 billion IoT devices in use by 2020, offering hackers more entry points into networks.

Dale Shulmistra, CEO, Invenio IT
But the best offense is good defense:

60% of MSPs report carrying cyber liability insurance should they or their clients become subject to a ransomware attack.

50% of MSPs report having external expertise lined up to help them in the event of a large scale attack against them or their clients.

MSPs considering purchasing cyber liability insurance should start by checking with their existing insurance carrier that provides their errors and omissions coverage to see what is offered.

In The News: Major Technology Companies Targeted by Ransomware Attacks

Hackers Aren’t Only Targeting SMBs

4 in 5 agree that MSP businesses are being increasingly targeted by ransomware attacks
During this period of extreme turbulence, MSPs need to buckle up and put on their oxygen masks. They need to protect themselves in order to keep their customers safe. MSPs must adopt two-factor authentication universally for any technology they use to service clients as well as their own business. In a climate where cyber attacks have become an everyday occurrence, **2FA across all technology solutions is one of the most effective controls to reduce the likelihood of a successful attack.**

**Ryan Weeks**, Chief Information Security Officer, Datto, Inc.
MSPs report enabling two-factor authentication (2FA) on the following tools and applications:

- **Remote Monitoring and Management (RMM)**: 71%
- **Password Manager**: 61%
- **IT Documentation**: 56%
- **Email Client**: 60%
- **BCDR**: 43%
- **Professional Services Automation (PSA)**: 58%

**In The News:** New Cybersecurity Threat Highlights the Need for MFA

Check out a demo of Datto RMM
Final Takeaways:

Businesses must prepare the front line of defense: your employees. Today's companies must provide regular and mandatory cybersecurity training to ensure all employees are able to spot and avoid a potential phishing scam in their inbox, a leading entrance point for ransomware.

Businesses must leverage multiple solutions to prepare for the worst. Today's standard security solutions are no match for today's ransomware, which can penetrate organizations in multiple ways. Reducing the risk of infections requires a multilayered approach rather than a single product.

Businesses need a continuity strategy. There is no sure fire way of preventing ransomware, although antivirus, perimeter protection, and patch management are essential. Businesses should focus on how to maintain operations despite a ransomware attack. A solid, fast, and reliable business continuity and disaster recovery solution is one part of that strategy. Since ransomware is designed to spread across networks and SaaS applications, endpoint and SaaS backup solutions designed for fast restores are also critical.

Businesses need a dedicated cybersecurity professional to ensure business continuity. SMBs often rely on a "computer savvy" staff member to handle their IT support and not an IT expert. If a company cannot afford a complete IT staff for 24/7 cybersecurity monitoring, they should be leveraging a managed service provider (MSP) who has the time and resources to anticipate and protect a company from the latest cybersecurity threats.
